

GOV. ROY COOPER, PLEASE STAND UP TO DUKE ENERGY!

Climate disasters are **devastating** North Carolina communities... and **getting worse**.

THE SCIENCE IS CLEAR:
Stopping the expansion of **fracked gas**
is the fastest way to slow the climate crisis.

But Duke Energy leaders plan to build **50** gas-fired power units – and **constantly raise your rates**.

Renewable power matched with storage is **cheaper** and **more reliable** than gas (methane). But Duke Energy is **only 5% renewable** in the Carolinas.

“We’re still going wildly in the wrong direction, but we can turn that around very, very quickly” by cutting methane emissions.

– Dr. Drew Shindell of Duke University and lead author of a landmark United Nations report on methane in May, 2021.

SPEAK OUT

URGE GOV. COOPER TO DECLARE A CLIMATE EMERGENCY:
Stop Duke Energy’s climate-wrecking gas expansion of power plants and liquified gas storage.
